Summer Development Internship

Interning is the best way to gain the experience you need to land an amazing job right out of college. Greenshades Software is a Jacksonville, FL based software firm with one of the best internship programs in the state. Here's what makes our program special:

The other guys	**Greenshades**
Spend most of your time working on documentation, watching presentations, doing busy work.	Spend most of your time writing code with real-world implications.
Work on a team with just yourself and your mentor.	Work on a team with a handful of seasoned programmers who are invested in your performance.
Write code in outdated languages and concepts.	Write C# code with the latest tools and libraries.
Hang out with old people who aren't any fun. Be lonely.	Hang out with recent grads who are a ton of fun. Smash some printers. Get a day off whenever a new Xbox One game ships.
Wear dress shoes, slacks, golf shirts…maybe even a tie.	Wear flip-flops, jeans, and t-shirts.

We typically receive a large number of applicants and accept a small percentage for our internship program. We will be evaluating applicants based on:

- Amount of coursework completed towards earning a BS/MS degree in Computer Engineering or Computer Science.
- Top grades or track record of success.
- A passion about programming, both inside and outside of school (tell us about your hobbies or side-projects).

About the Internship
Our company is located in Jacksonville, FL. Summer internships last between 10 and 12 weeks. Travel accommodations and allowances will be issued for those wanting to apply that are outside of Jacksonville.

Apply Now
To apply, please email us at careers@greenshades.com, attaching a current resume and an application, located on the Careers page of our website. In the body of the email, explain why you would be a good fit for this position. If you have a website, send us the URL.

About Greenshades
Greenshades Software is based in Jacksonville, Florida. We were founded by software developers, are run by software developers, and strive to offer the very best development jobs. We are a mid-sized company (about 75 employees) which means we're small enough to actually get stuff done in a dynamic, fun environment, but big enough to have dedicated QA staff, great benefits, and those fancy development tools you love to use. Our people love it here. If you don't believe us, just check out the comments on glassdoor.com to see some feedback that isn't coming from HR.
